If you're on the same Wi-Fi network, AirPlay simply connects and starts streaming.

AirPlay lets you stream video and mirror your display from iPhone, iPad, or Mac to Apple TV.. It also lets you stream audio to Apple TV and any compatible speakers, including those connected to an AirPort Express router.. That makes AirPlay great for entertainment, education, and enterprise — just tap a button, choose a target, and watch your show or run your presentation.. If you're not on the same network, AirPlay can use point-to-point Wi-Fi to stream.
